Resume

The one-page version. The [Experience](#) page has the full fifteen-year timeline with detail; the [Story](#) has the rest.

Recent experience

Viyu Network Solutions (July 2025 - Present)

Sr. Services Engineer; acting as Solutions Architect & Automation Engineer

- Designed and operate an MSP operations engine spanning Microsoft 365, ConnectWise Manage/Automate/ScreenConnect, ITGlue, Sophos, VMware vCloud, Cavelo, and Meraki, built as a Claude Code plugin — 13 vendor-platform CLIs (141 commands across 14 CLIs total, including the platform's own), 307 skill modules, 28 agent definitions — deployed on self-hosted Docker Swarm for daily service delivery; 6,000+ authored commits over ~7 months, with machine-generated CLI contracts kept fresh by CI conformance gates
- Instituted production safety controls for autonomous agents operating on client systems: destructive-action gating with typed confirmation and operator attribution, an approval kernel for billing/security writes, and a write-verification protocol requiring independent state re-reads — each codified from a real incident postmortem
- Assumed sole operation of a six-figure-per-month cloud-billing process by extracting a departing colleague's manual Excel workflow (150+ per-client pricing calculators) into automated pipelines — validated by shadow runs reaching a -1.24% aggregate gap against the manual process before production cutover, behind a tiered approval chain with rollback
- Developed a cross-vendor multi-agent development practice: role-typed reviewer/planner/executor fleets (2,049 role-typed subagent sessions, 670 independent reviewer runs, May-Aug 2026), independent second-opinion PR review contracts between Claude and Codex, and a GitHub-Projects control plane requiring attribution and proof comments for all agent work
- Led multi-tenant Microsoft 365 consolidation and migration engagements end-to-end — SOW through dry-run reports through cutover — including a two-company domain consolidation and several tenant-to-tenant migrations, spanning a multi-terabyte, several-hundred-user SharePoint/M365 migration platform
- Built post-BEC fleet-wide rogue remote-access detection sweeping managed endpoints via RMM software inventory (read-only detection, operator-gated remediation), and codified an evidence-grading standard (Verified/Inferred/Open) for external incident reporting
- Automated monthly/quarterly client business reviews (PBR/QBR: 8 data sources, security-baseline scoring, auto-published reports) and invoice-review workflows that previously took 4-8 hours of manual assembly each

- Automated daily timesheet/billing reconciliation as an unattended agent routine; time-entry compliance rose from 21.0 to 24.25 logged days per month after adoption (+15%, CWM data H2-2025 vs 2026)

ZG Companies (December 2023 - March 2025)

Senior Technical Consultant

- Increased M365 Secure Score to 88.8%, standardized Teams & SharePoint governance
- Developed 70+ Power Automate Flows for financial reconciliation and operational automation
- Implemented Alarm.com (23 properties), designed WISP (18 properties), deployed Atera IT management

StackAdvisors (March 2023 - August 2023)

Integrations Manager | Interim Azure C# .NET Engineer

- Reduced Azure hosting costs by 40%, improved CI/CD deployment speed by 50%
- Resolved .NET C# Blazor architectural issues, designed scalable Azure microservices

Skills

Claude Code/Codex agent orchestration, MCP server development, TypeScript, Python, Rust/Tauri, Docker Swarm/Portainer, GitLab/GitHub CI, ConnectWise/ITGlue/Sophos/Graph APIs, Qdrant/Ollama, PowerShell.

Automation Highlights

AI-Powered Toolchains

- AI-assisted workflow tooling for service platforms, reporting, and operational review
- Governed workflow patterns for scoped actions, evidence trails, and human review
- n8n workflow automation for MSP operational efficiency

Workflow Optimization

- 70+ Power Automate Flows across multiple organizations
- Power Platform implementation with Paylocity HRIS integration
- Custom TypeScript and PowerShell automation (40+ scripts per engagement)

Enterprise Migration Tooling

- Microsoft 365 migration planning, tracking, and evidence support
- Migration orchestration and operational checkpoint design
- Exchange Hybrid and identity automation
